Law Faculty Raising Environmental Awareness

**Abstract**

Unquestionably increasing environmental awareness among the current population are considered from the main tasks. Environmental approach is not just some for State maybe , it is global topic of the entire international scale. this article is about a number of environmental awareness provides extensive analysis on.

**Keywords:** Natural history of environmental consciousness, scientific in increasing environmental awareness fundamentals, practical approaches to increasing environmental awareness, environmental awareness social and political impact of the increase

**Introduction**

Current environmental issues have posed a global threat from all sides we can take the development of environmental consciousness in time a solution. raising environmental awareness is making every individual environmentally friendly and respectful means to have relationship with the know. solving environmental problems in a study that will restore economic ,social stability prove. The development of ecological consciousness has historically been a nature of humanity related to his relationship with . Ecological diversity from the 20th century the disappearance of depletion of Natural Resources in the face of climate change and hunger broad attention to the development of environmentalist consciousness in order to eliminate factors began to focus.

**Main body**

**Scientific basis for increasing environmental awareness**

Several scientific approaches to the development of environmental consciousness, humanity is given an ecological the concept of protection of the environment through different conveyances to do. According to the data surrounding-all problems with the environment are mainly caused by humanity is releasing.

**Psychological approach to the development of environmental consciousness**

Ecology, Environmental Protection mainly psychologically promotion is also much more effective, protecting the environment every human being must do it spiritually. The environment of hysteria how to react to conservation his mental experiences make him in relation to how he imagines, researchers say the development of environmental ethics is also directly related to with psychological impact.

**Ecology friendly relationship pedagogic approaches to arousal**

A pedagogic approach to preserving nature can also give good results is foreseen. To treat humanity with respect for nature the need good to be pedagogically taught is a science in schools from young age in them, love for nature forms feelings

**To protect the environment social approach to promotion**

The social approach to environmental protection is broader it is remarkable in meaning for its consequentiality on the mountain of conservation of Ecology environmental issues in social networks are bringing them to humanity harmful consequences should make them treat ecology will helps to understand.

### Discussion

Several practical approaches with the aim of developing environmental awareness it is being implemented. Developed educational programmes related to ecology particular under development. The principle of green space is based on programmes to the people's labor of the population tree planting greenery is widely involved in preserving nature. Ecology is an important international for the whole world it is a matter, therefore, of a number in order to raise environmental awareness international organizations are formed. These include "Earth Hour" and we can example of companies "Environmental Day". Moreover, digital technology is also around through modern platforms love for the environment for nature, for the need preserve it including there is widespread condemnation of environmental awareness raising.

### Conclusion

The world is rapidly at the same time the danger to ecology it is also secret that the main factor that sets in is humanity itself. Humanity is in a fact a being capable of much destruction of nature as well its restoration in its own hands is actually only specific ecological knowledge requires environmental awareness. Conservation of ecology is necessary for all of us because ecology gives us economic, social, cultural, ecological in all respects affects.
